

Fusebox Hosted Payment Gateway

Experience peace of mind and ultimate freedom with our robust and secure next-generation payment solution.

No matter what business you're in — hospitality, restaurant or specialty retail — Fusebox can help you better manage your payment processing, stay compliant and remain competitive.

Fusebox: The Force of Fusion

Fusebox™ is Elavon's new payment gateway. The hosted environment mitigates risk by ensuring that cardholder data is stored behind our firewall. The core platform — built on proven and redundant switch technology — delivers maximum uptime.

Fusebox adheres to the latest PCI and PA-DSS security standards, and a robust Data Protection Module features advanced security options, including tokenization.

With Fusebox, you can easily add new locations, implement system upgrades and maintain version control across your enterprise. Interfaces to a vast array of POS/PMS providers and certified transaction processors give you the ability to map payment types, communication methods, processing rules and user rights to the unique needs of your business.

Fusebox is Built on a Foundation of Six Key Elements

SECURITY. The hosted environment ensures that cardholder data is stored behind our firewall, protecting you and your customers.

STABILITY. The core platform is built on proven, dependable and redundant switch technology that delivers maximum uptime.

CONNECTIVITY. Interfaces to a vast array of POS/PMS providers and certified transaction processors provide the freedom of choice.

FLEXIBILITY. Payment types, communication methods, processing rules and user rights are mapped to the unique needs of your business.

VISIBILITY. Batch management and reporting are accessed through an online portal, providing a real-time view into the transaction lifecycle.

SIMPLICITY. It's easy to add new locations, implement system upgrades and maintain version control across your enterprise.

Fusebox Delivers Payments

Fusebox is a highly secure, reliable and flexible payment gateway that makes it easy for your customers to handle a growing volume of payment and other transactions. Elavon's solution provides a single interface for delivering payments and other transactions securely from any merchant location to your choice of banks, processors and acquirers in a secure, compliant environment. Batch management and reporting are accessed through an online portal, providing a real-time view into the entire transaction lifecycle.

Security & Stability Deliver Peace of Mind

Since Fusebox is a hosted solution, critical cardholder data is moved from the merchant's location to a centrally-managed host within a secure data center at Elavon — mitigating risk and reducing the associated PCI liability.

- Fusebox incorporates the latest data security protections and exceeds the most stringent PCI and PA-DSS requirements and industry compliance standards.
- A comprehensive and flexible Data Protection Module features advanced security, including tokenization. A Secure Device Module supports the removal of all cardholder information from the POS/PMS and replaces it with a Unique ID ("token") and truncated card number.
- Fusebox is built on a proven and reliable Stratus System platform for fault tolerant computing that delivers maximum uptime.

"Elavon has removed the complexities from the installation process and I can count on my customers being taken care of by Elavon's gateway representatives."

Chris Donahue, Product Manager,
PAR Springer Miller

Extensive Connectivity Options Provide Freedom of Choice

Elavon understands that the way you accept payments varies greatly depending on your business.

Fusebox reduces the complexities by providing one-to-many connectivity, consolidating payments from various systems and securely delivering them to your choice of certified banks/processors. Standardized APIs ensure seamless integration with hundreds of value-added resellers and software providers supporting multiple POS/PMS platforms. Fusebox streamlines processor certifications so you typically only need one certification to Elavon's hosted gateway — not to each processor — minimizing the time and expense associated with adding new POS systems or end points. You can choose from a variety of gateway network connectivity options, including SSL, MPLS, VPN and dial.

End-to-End Connectivity & Reporting

At the Point of Sale

Simplify implementation with our integrated solution to hundreds of POS/PMS providers and our advanced API interfaces that support a variety of message formats.

In the Back Office

Aggregate and manage payment activity through a secure online portal.

Across an Enterprise

Consolidate processing with our secure and redundant hosted solution.

To Any Processing Endpoint

Route transactions to multiple banks, processors and acquirers for authorization and settlement.

Flexibility for Your Unique Needs

Fusebox provides consolidated processing and reports and supports a robust range of payment types.

- Credit and Debit: Extend customer payment options with support for Visa®, MasterCard®, American Express® and Discover® Network Cards.
- Electronic Check: Reduce costs and improve cash flow with check verification, guarantee and conversion services.
- Gift and Prepaid Cards: Keep customers coming back and spending in your business.
- Signature Capture: Eliminate paper with our advanced hosted receipt and document imaging system.
